Ventrol® Introduces New Compact Fan Coil Unit

Anjou, Quebec (May 17, 2010) – Ventrol Air Handling Systems, Inc., a CES Group Company, has recently introduced a new 500–20,000 cfm air-handling unit. Rated up to 8-inches static pressure, and available with FANWALL TECHNOLOGY® by HUNTAIR®, this unit is ideal for low-height ceiling installations or limited-space equipment rooms.

Says Joe Naccarello, National Sales Manager for Ventrol, “Ventrol fan coil units, model VFCU, have all the standard features you would expect from an air-handling manufacturer, but are not constrained by a catalog.” Naccarello goes on to say, “One of the biggest benefits we offer our customers is *custom* solutions, tailored to their unique applications. This new compact fan coil unit is an important part of our custom approach.” Key features and benefits include:

- **Removable side panels**—provide easy access to internal components, and offer the needed rigidity (deflection L/240 and <1% leakage) to maintain a tight air seal. Two-inch double-wall construction is standard with either fiberglass or foam insulation options for the best thermal bridging protection.
- **Flexible FANWALL TECHNOLOGY**—Ventrol offers designers added flexibility in optimizing the fan wheel geometry and motor horsepower for a specific application. The result is smaller, quieter fans and motors, running closer to peak efficiencies, thus reducing energy costs, all while improving system reliability.
- **AHRI Certified™ heating and cooling coils**—for verifiable performance, especially critical for LEED® documentation.
- **Insulated and pitched drain pan**—aids in the drainage and prevention of contaminates.
- **Factory-wired fans, custom electrical panel, and VFD drive options**—for fast installation and start-up, while reducing on-site labor costs.

Ventrol, since 1998, provides packaged and custom air-handling equipment designed for retrofit or new construction projects from 500 to 300,000+ cfm in size. Contact a local Ventrol Representative to learn more about the Ventrol model VFCU fan coil unit. Locate your nearest Representative by visiting www.ces-group.com.
